Python Programming Practical

Practical – 7

Roll No. : 34	Name: Mehek Sawant
Class : Sy-It	Date/Time of Submission: 4-08-2026

Practical No. 7 - Write Algorithm, Code and Output

Q. 1. Write algorithm for the following:

a. Write a program that takes two lists and returns True if they have at least one common member.

Code:

```
list1 = [1, 2, 3, 4]
```

```
list2 = [5, 6, 3, 8]
```

```
common = False
```

```
for i in list1:
```

```
    if i in list2:
```

```
        common = True
```

```
        break
```

```
print(common)
```

Output:

```
= RESTART: C:/Use:
Python/prac7.py
True
```

b. Write a Python script to sort (ascending and descending) a dictionary by value.

Code:

```
d = {'A': 50, 'B': 20, 'C': 40, 'D': 10}
```

```
# Ascending order
```

```
asc = dict(sorted(d.items(), key=lambda x: x[1]))
```

```
print("Ascending:", asc)
```

```
# Descending order
```

```
desc = dict(sorted(d.items(), key=lambda x: x[1], reverse=True))
```

```
print("Descending:", desc)
```

Output:

```
= RESTART: C:/Users/DELL/OneDrive/Desktop/Mehek/Sl  
Python/prac7.py  
Ascending: {'D': 10, 'B': 20, 'C': 40, 'A': 50}  
Descending: {'A': 50, 'C': 40, 'B': 20, 'D': 10}  
>
```

Q. 2. Write a python program that creates a list of 3 fruit names, adds one more fruit to the list, prints the entire list and prints the first and last fruit in the list.

Code:

```
fruits = ["Apple", "Banana", "Mango"]
```

```
fruits.append("Orange")
```

```
print("Fruit List:", fruits)
```

```
print("First Fruit:", fruits[0])
```

```
print("Last Fruit:", fruits[-1])
```

Output:

```
Python/prac7.py
Fruit List: ['Apple', 'Banana', 'Mango', 'Orange']
First Fruit: Apple
Last Fruit: Orange
```
