Practical – 8

Roll No. : 34	Name: Mehek Sawant
Class : SY-IT	Date/Time of Submission: 11-08-2026

Practical No. 8 - Write Algorithm, Code and Output

Q. 1. Write algorithm for the following:

a. Write a program to accept and pass radius to a function that returns area and circumference (using tuple).

Code:

```
import math
```

```
def circle_details(r):  
    area = math.pi * r * r  
    circum = 2 * math.pi * r  
    return (area, circum)
```

```
radius = float(input("Enter radius: "))
```

```
result = circle_details(radius)
```

```
print("Area: ", result[0])  
print("Circumference: ", result[1])  
print("Mehek S034")
```

Output:

```
= RESTART: C:/Users/DELL/OneDrive/Desktop/Mehek/SEM 3/Python/P8.py
Enter radius: 5
Area: 78.53981633974483
Circumference: 31.41592653589793
Mehek S034
```

b. Write a program to perform basic file operations on text files and binary files.

Code:

```
with open("example.txt", "w") as f:
    f.write("Hello Mehek! \n Exams coming soon!!!!!!")
```

```
with open("example.txt", "r") as f:
    content = f.read()
    print("Text file content:\n", content)
print("Mehek S034")
```

Output:

```
Text file content:
Hello Mehek!
Exams coming soon!!!!!!
Mehek S034
```

c. Write a Python program to read last n lines of a file.

Code:

```
with open("b_sample.bin", "wb") as bf:  
    data = b"This is binary data"  
    bf.write(data)
```

```
with open("b_sample.bin", "rb") as bf:  
    b_content = bf.read()  
    print("Binary file content:\n", b_content)
```

```
print("Mehek S034")
```

Output:

```
= RESTART: C:/Users/DELL/OneDrive  
Python/P8.py  
Binary file content:  
  b'This is binary data'  
Mehek S034
```
